

MAKING SPRAY JUDGEMENTS

Scout each individual field beginning at growth stage 5 on a weekly basis. At, or just before stage 7, make a disease evaluation. Then use the point guide to determine the need to spray.

If a "zero" is indicated in any major category (I-VII), then it will probably not be profitable to spray.

<u>Total Points</u>		<u>Chances of Economic Return</u>
575 +	=	Good
425 - 574	=	Fair
Below 425	=	Poor

When to spray: Generally the most effective time for fungicide application is at flag leaf emergence (Feekes stage 8-9). Applications through stage 10.5 (heading complete) may be beneficial, particularly for control of *Stagonospora glume blotch*. Refer to the fungicide label for timing of application.
