TEACHING

Undergraduate

AAEC 3690 Agribusiness Finance: This course is designed to teach financial concepts and analysis related to agribusiness firms including analysis of financial statements, time value of money, risk and return, asset valuation, and capital budgeting.

AAEC 4870/6870 Futures and Options Markets: This dual-level course is designed to introduce derivative markets including forward and futures contracts, and call and put options. The course covers the mechanics of market functioning, trading, pricing, hedging, and risk management strategies using derivative markets.

Graduate

AAEC 6620 Applied Econometrics: This course is designed to provide students hands-on experience in the empirical application of econometric theory they learned in an introductory econometric course. For this purpose, this course gives students additional practical experience in estimating, reporting, and interpreting results with linear probability models, panel data, time series data, and heteroskedasticity.

AAEC 8400 Agricultural Market Structure and Analysis: This course is designed to provide economic theory of industrial organization and empirical analysis of market structure, market power, and strategic decisions. The course objective is to provide students a theoretical and empirical basis for evaluating a firm's behavior and an industry's structure and performance.

AAEC 8500 Price Analysis: This course is designed to introduce economic theory and applied methods in commodity price analysis. The course objective is to provide students a theoretical and empirical basis for analyzing basic determinants and patterns of commodity prices, the

price linkages across different commodities, the price discovery and efficiency of futures markets, and for developing forecasting models for price levels and volatility.
