

## Sustainable Turfgrass Training for Employees

Sustainable Turfgrass Training emphasizes cultural practices that are environmentally friendly, lead to less chemical inputs, and reduce water waste. Created at the request of the industry, the classes are geared to the “boots on the ground” landscape crew worker.

**Turfgrass Identification** - Identify the six major turfgrasses found in Georgia and the unique needs of each grass type.

**Turfgrass Irrigation** – Watering and troubleshooting common irrigation system problems.

**Turfgrass Cultivation** - Care and maintenance of turfgrass leads to healthier lawns that have less disease and use less water.

**Turfgrass Installation** - Start right with sod, seed, and sprig to give a new lawn a healthy start.

### ***Flexible and Comprehensive*** -

- Trainings can be presented individually or as a group to fit your schedule. They can even be taught in the early morning before crews head out.
- Each topic is approximately 45 minutes.
- No charge.
- Each training includes take away handouts for easy reference and a Certificate of Completion.
- Tell your clients your crews are trained in Sustainable Turfgrass!
