---

FIRST Lego League introduces students to the exciting world of science and technology. This program features a real-world challenge to be solved by research, critical thinking, construction, teamwork, and imagination. Guided by the adult coaches, teams use LEGO bricks to build a model with a motorized part and develop a coordinating poster to illustrate their journey.

- Strategize, design, build, program and test a robot using LEGO MINDSTORMS technology
- Choose to participate in official tournaments and local events
- Develop employment and life skills including critical thinking, time management, collaboration, and communication while becoming more self confident.
