

FROM YOUR GARDEN TO YOUR TABLE

Join UGA/Cobb County Extension for this informative workshop. Learn about planting a vegetable garden and safely preserving your produce. Horticulture topics will include: site selection, garden planning, soil testing, fertilization, soil preparation, mulching, maintenance, vegetable culture, common diseases and insects. Food preservation topics will focus on pressure canning, bath canning and freezing of your produce.

These classes are intended to help the novice, as well as, seasoned gardeners and to review up-to-date food preservation procedures. We are looking forward to having a good time and sharing good advice. Please join us in celebrating the bounty that spring and summer have to offer here in Georgia.
