### Suggestions for Proper Injection of Animal Drugs

- The only acceptable injection site on a pig is in the neck. (YPQA+ and PQA+)
- Properly restrain the animal before giving an injection.
- Give injections according to label instructions. Subcutaneous (SQ) means under the skin; intramuscular (IM) means in the muscles; intravenous (IV) means into the blood. (These are some routes of administration.) **\*\*It is highly recommended that only a licensed veterinarian or other trained personnel should give IV injections.**
- When the label directions permit, give injections under the skin so that the muscle tissue is not injured.
- Use sterilized needles and syringes. Keep the bottle cap clean.
- Do not transfer needles back and forth from animal to bottle because you may transfer bacteria from the animal's skin back into the bottle.

### Treatment Record

Treatment (date & time)	Animal ID Name, species, ID Number, description	Condition Being Treated	Estimated Weight	Treatment Given (medication dispenses, amount and route of administration)	Person (who gave the treatment)	Instructed Withdrawal	Results	Withdrawal Completed (date & time)	**If this is an extra label of Rx drug, list the veterinarian's name, address, and phone number who prescribed or directed the treatment**

**\*Retain (keep) this treatment record in your files for 12 months after marketing your animal. \*\*Please provide a copy of the prescription attached to the back of this page for all extra label drugs. Please note that Over the Counter Drugs may be prescribed as extra label.**
