Do you require a test for minerals or bacteria?

Bacteria testing is time sensitive. You will be given a kit with specific instructions that you must follow in order to get reliable test results. You will then need to ship the sample overnight (a label is included and shipping costs are included in the fee for the test). A check for the testing fee should be included with the sample when it is shipped. If you are testing for bacteria, you do not need to complete the lower portion of this form.

Mineral testing will give you results for common minerals found in water. Sterilize a pint jar and take the sample from the tap. Cover with saran wrap and then the jar lid and bring the sample to our office.

Mineral Test Requested

Household water well Irrigation Well Fish pond Other

Household Water Test will give the following results: Water pH, hardness, saturation index, alkalinity, conductivity, mineral concentrations of: aluminum, boron, cadmium, calcium, carbon dioxide, chloride, chromium, copper, fluoride, iron, magnesium, manganese, molybdenum, nickel, nitrate-nitrogen, phosphate, phosphorus, potassium, silica, sodium, sulfate, total dissolved solids, and zinc.

Testing for Lead content requires a separate test.
